

PRODUCT DESCRIPTION

Danterr source and distribute a range of different thermal Ecotherm blankets for roof, wall and other installations. Ecotherm concrete curing blankets are designed maintain a higher curing temperature during low temperature conditions and when working with extreme weather.

BENEFITS

- Successful curing during extreme conditions
- Extra Heavy Duty cover available
- Group 1 Fire performance classification
- R0.2 Thermal Break in-situ
- Acoustic dampener
- Flammability low, suitable for all BAL's in bushfire-prone areas
- Can also be used for timber frame and commercial steel frame constructions

FEATURES

Ecotherm is made up of an anti-glare coating, aluminum foil, polymer adhesive, woven polymer, polymer film, polyethylene extrudate and XPE foam core.

Danterr can supply a range of curing and thermal curing blankets for all applications. Our preferred thermal curing blanket is ThermalBreak™. Total system R values and material specification can be requested from manufacturers.

Insulating during intense weather reduces the likelihood of concrete cracking and slab unevenness.

HANDLING AND STORAGE

Store this product undercover in a clean, dry place in the pack provided out of contact with alkaline products, cement and mortar.
